

## Environmental Management System of Abifor

The superior target of the **Abifor Group** is to safeguard a sustainable profitable growth enabling us to fulfil our obligations to our shareholders and secure our jobs at all sites. Continuance and success of our company are of highest significance and priority.

The **Abifor Group** established its own **Environmental Management System** by their locations in **Zurich (Switzerland)**, in **Wutoeschingen (Germany)** and in **Shanghai (China)**. This environmental system is an integrated part of the Quality Management System in line with ISO 9001:2008. It is the binding for all employees and commits us to the protection of the environment, to the avoidance of environmental pollution, to the minimisation and separation of waste. Among other things we separate PE foils and carry it to the recycling process. In addition we also avoid, whenever possible, substances requiring specific labelling regarding REACH.

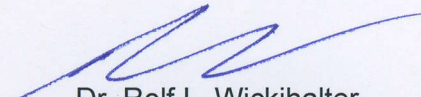

In terms of environment-friendly production, we even go one step further. The location Germany and the Headquarters in Switzerland purchase 100 % of the electricity from local water power plants under the label «NatureEnergy». By renouncing power from fossil energy sources and nuclear power neither CO<sub>2</sub> nor radioactive waste is produced. Thus, we save around **400 t of CO<sub>2</sub>** each year.

We assess the determined environmental aspects and compare them with the set targets. Any type of wastage endangers the environment in the long term and results in higher costs.

We strictly comply with the relevant labour, safety and environment laws, regulations and stipulations, and in doing so adhere to the ethical principles of the company.

Our environmental policy is understood and adhered to by all our employees. It is available to the public.

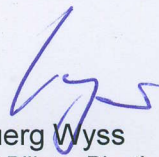

Zurich / Wutoeschingen / Shanghai, 01/07/2011
